PhD, *Federal University of Rio de Janeiro*, Rio de Janeiro, *History of Science and Technology, and Epistemology*. **2016 - current**

Masters, *Federal University of Goias*, Goiania, *Sociology*. **2013-2015**

Bachelors, *Federal University of Goias*, Goiania, *Social Science*. **2012**

Master thesis

Cyborg Contingence and Body's Technology: *Rethinking Science Characters*

supervisors: Camilo Braz

description: Donna Haraway's political myth is the main subject of this research. The investigation implies to understand the cyborg as agent of feminist and social transformation through three possible images. Firstly, we intend to know, in our society, who is cyborg, specially in the capitalist and western society. There is a historical retrospective about cybernetics, computation and medicine; there is also basic conceptions to the better understanding of the research. We conclude that the cyborg is not only a myth, even there are some cyborgs looking for a formal identity in some governments. After that, we research the cyborg in the imagination of Science Fiction in some movies and television sitcoms. This way, we want to know if these cyborgs are fiction or reality and if there is a border between these categories. Finally, we look into the cyborg of feminist's theory, where the political myth is the main agent of Science transformation. We conclude that new characters are needed to re-build a Science in which the Man is not the center of the history.

Experience

NGO, *Escola de Ativismo - School of Activism*, Sao Paulo. **2016-current**

Colaborator facilitating workshops, making and translating guides, doing research in the subject of Security of Information and OpSec.

Government Employee, *Federal University of Goias*, Goiania. **2011-current**
